

SAMEER CHACHIYA

Senior Software Engineer • AI Engineer • Full Stack Developer

 Bengaluru, India | +91-9741923904

sameerchachiya11@gmail.com | [linkedin.com/in/sameerchachiya](https://www.linkedin.com/in/sameerchachiya) | sameerchachiya.tech

PROFILE

Results-driven **AI Full Stack Developer with 5+ years of experience** delivering scalable systems optimising performance and building agentic AI systems. Proven ability to bridge cutting-edge AI capabilities with enterprise-grade Java/Spring Boot/python and React architectures.

Consistent hackathon winner with a track record of streamlining workflows, reducing overhead costs, and delivering high-quality solutions with rapid Prototyping

Seeking a dynamic role to apply strong problem-solving and development expertise for impactful outcomes.

CORE SKILLS

AI : LangChain · LlamaIndex · LangGraph · HuggingFace Transformers · RAG · Agentic AI · MCP · AI Safety · FineTuning · Tool / Function Calling · Chain-of-Thought

Languages: Java · Python · JavaScript · TypeScript

Frameworks: Spring Boot · React · FastAPI · RestAPI · WebSockets · Redis

Cloud & DevOps: AWS · AWS Bedrock · Kafka · Docker · Kubernetes · Git · Jenkins · Splunk

Databases: PostgreSQL · MySQL · NoSQL · GraphQL · Qdrant · Pinecone · Chroma · Vector Databases

Architecture: Microservices · Distributed Systems · System Design (HLD/LLD) · Design Patterns · Data Structures · Algorithm Design · Microfrontend

EXPERIENCE

Software Engineer – Senior Associate | *First Citizens India*

Nov 2025 – Present

- ▶ Primarily contributed to the **Banking space** for Cards & Payments Domain.
- ▶ Developed enterprise backend systems focusing on risk evaluation, compliance, and AI-driven workflow automation.
- ▶ Delivering low-latency, high-reliability systems under strict correctness constraints in a regulated banking environment.
- ▶ Established a secure firewall layer for Generative AI systems along with the architects, from POC before scaling the solution across the enterprise ecosystem.
- ▶ Integrated internal applications with AI using MCP protocols, enabling services to leverage LLM-powered automation and intelligent workflow orchestration.
- ▶ Optimised LLM token consumption through prompt engineering, context management, and response caching strategies (40% efficient).
- ▶ Designed risk-scoring algorithms to improve decision consistency across financial workflows.

Software Engineer II — Full Stack AI | *Verizon*

Aug 2023 – Nov 2025

- ▶ Primarily contributed to the **Fiber Engineering** space.
- ▶ Delivered AI-powered enhancements integrating LLMs (GPT, Claude) into existing systems— enabling intelligent automation and contextual decision-making
- ▶ Designed and scaled 15+ microservices handling 100K+ daily requests at sub-50ms latency for production-grade AI inference
- ▶ Improved query database performance by 30% through referential integrity enforcement.
- ▶ Architected end-to-end RAG pipelines (embedding → vectorDB → retrieval → LLM inference) for context-aware production AI responses.
- ▶ Led agentic AI adoption — Multi-agent-based workflows for autonomous task execution: code assistance, issue analysis and workflow orchestration. Thus, increasing sprint throughput by ~3× and reducing debugging/triage effort by ~40%
- ▶ Resolved 50+ UI-related bugs and maintained 10+ backend services, taking full ownership of new features while ensuring reliability, observability, and system performance improvements, resulting in a 20% reduction in UI load times.
- ▶ Mentored 2 interns on AI integration strategies and microservice design. Also, assisted with 5+ code reviews and 2+ key feature deliveries per sprint.

Software Engineer I | *Oracle Cerner*

Oct 2021 – Aug 2023

- ▶ Primarily contributed to **Healthcare** space.
- ▶ Developed/modified 45+ secure applications across 5+ cross-functional global teams.
- ▶ Developed 150+ unit test cases; participated in 100+ code reviews ensuring code quality and system stability.
- ▶ Containerised applications into Docker images, optimising server utilisation and reducing cloud costs.
- ▶ Provided Tier 1 support for 8+ applications (break-fixes and data changes).
- ▶ Created 10+ microservices integrating Kafka into an existing Monolith.
- ▶ Contributed to Angular-to-React migration.

KEY ACHIEVEMENTS

Hackathon Winner | *Verizon* | Designed and developed an application from PoC, assessing data source health. Thus, improving DB anomaly detection accuracy.

Hackathon Winner | *Oracle Cerner* | Automated CVE fixes, cutting engineering time from 14 hours to 30 minutes per CVE.

PROJECTS

IT Service Management System | *Full-Stack*

- ▶ Developed an internal IT service management system that empowers employees to create tickets for any issue they encounter.
- ▶ Enhanced the UI by incorporating an intuitive interface that enables the admin to seamlessly assign tickets to service engineers, facilitating prompt resolution of technical issues and improving overall operational efficiency.

AI Log Analyser | *Vector Search / LLM*

- ▶ Upload logs → AI returns root cause, potential cause, and solution using vector search + LLM inference

Health Insurance Cost Prediction | *Machine Learning*

- ▶ Random Forest + Regression Supervised Learning model for cost prediction; deployed as a Flask web app

EDUCATION

B.E / B.Tech – Computer Science & Engineering

Visvesvaraya Technological University (VTU)

Languages: English (professional fluency)

Open to AI / Full Stack / Backend roles in Bengaluru · Remote

Indian National · Valid Passport · Visa Sponsorship

Open to opportunities Worldwide · Australia · Germany · Switzerland · New Zealand · Canada · UK · Singapore · UAE · KSA · Qatar and beyond
