

SAMEER CHACHIYA

Senior Software Engineer • Full Stack AI Engineer

📍 Bengaluru, India | +91-9741923904

sameerchachiya11@gmail.com | [linkedin.com/in/sameerchachiya](https://www.linkedin.com/in/sameerchachiya) | sameerchachiya.site

PROFILE

Results-driven **AI Full Stack Developer with ~5 years of experience** delivering scalable systems optimising performance, and building agentic AI systems for global enterprises. Proven ability to bridge cutting-edge AI capabilities with enterprise-grade Java/Spring Boot/python and React architectures. Consistent hackathon winner with a track record of streamlining workflows, reducing overhead, and delivering high-quality solutions.

Seeking a dynamic role to apply strong problem-solving and development expertise for impactful outcomes.

CORE SKILLS

AI : LangChain · LlamaIndex · LangGraph · HuggingFace Transformers · RAG · Vector Databases · Prompt Engineering · Agentic AI · MCP · AI Safety · Vibe Coding

Languages: Java · Python · JavaScript · TypeScript

Frameworks: Spring Boot · React · FastAPI · RestAPI · WebSockets · Redis

Cloud & DevOps: AWS · AWS Bedrock · Kafka · Docker · Kubernetes · Git · Jenkins · Splunk

Databases: PostgreSQL · MySQL · NoSQL · Qdrant · Pinecone · Chroma

Architecture: Microservices · Distributed Systems · System Design (HLD/LLD) · Design Patterns · Data Structures · Algorithm Design

Core Competencies: Problem Solving · Critical thinking · Agile · Googling · Technical Leading

EXPERIENCE

Software Engineer – Senior Associate | First Citizens India

Nov 2025 – Present

- ▶ Primarily building backend systems for **cards & payments**, focusing on **risk evaluation**, automated decisioning, and compliance-driven workflows.
- ▶ Designed **risk scoring algorithms** improving decision consistency in compliance-driven financial workflows
- ▶ Delivering low-latency, high-reliability systems under strict correctness constraints in a regulated environment
- ▶ Revamped real-time functionalities, optimising thousands of rules to achieve **50ms execution time**.
- ▶ Integrated internal applications with AI using **MCP protocols**, enabling services to leverage LLM-powered automation and intelligent workflow orchestration.
- ▶ Established a secure **firewall layer for Generative AI systems** along with the architects, using the application as a proof of concept (POC) before scaling the solution across the broader enterprise ecosystem.
- ▶ Optimised **LLM token consumption** through prompt engineering, context management, and response caching strategies, reducing inference costs while maintaining response quality and accuracy.

Software Engineer II — Full Stack AI | Verizon

Aug 2023 – Nov 2025

- ▶ Primarily contributed to the **Fiber Engineering** space, scaling it to handle **peak traffic of 100K+/day (from 40K+/day)**.
- ▶ Delivered AI-powered enhancements integrating LLMs (GPT, Claude) and agentic workflows into Java, Spring Boot, Python, and React — enabling intelligent automation and contextual decision-making
- ▶ Designed and scaled **15+ microservices** handling 100K+ daily requests at sub-50ms latency for production-grade AI inference
- ▶ Architected end-to-end **RAG pipelines** (embedding → vectorDB → retrieval → LLM inference) for context-aware production AI responses
- ▶ Led agentic AI adoption — Multi-agent-based workflows for autonomous task execution: code assistance, issue analysis and workflow orchestration. Thus, increasing sprint throughput by **~3x** and reducing debugging/triage effort by **~40%**
- ▶ Resolved **50+ UI-related bugs** and maintained **10+ backend services**, taking full ownership of new features while ensuring reliability, observability, and system performance improvements, resulting in a 20% reduction in UI load times.
- ▶ Mentored 2 interns on AI integration strategies and microservice design, enabling team-wide GenAI capability uplift. Also, assisted with **5+ code reviews** and **2+ key feature deliveries** per sprint.
- ▶ Improved query database performance by **30%** through referential integrity enforcement.
- ▶ **Hackathon Winner:** Designed and developed a pioneering application from PoC to deployment, assessing data source health. Thus, improving anomaly detection accuracy by **30%**.

Software Engineer I | Oracle Cerner

Oct 2021 – Aug 2023

- ▶ Primarily contributed to **Healthcare** space. Developed/modified **45+ secure applications** in Java, Spring Boot, & React JS across 5+ cross-functional global teams
- ▶ Automated software delivery with **15+ Java Groovy scripts** achieving CI/CD, increasing delivery speed by 40%
- ▶ Developed **150+ unit test cases**; participated in **100+ code reviews** ensuring code quality and system stability
- ▶ Containerised applications into Docker images, optimizing server utilization and reducing cloud costs
- ▶ Provided Tier 1 support for 8+ applications (break fixes and data changes)
- ▶ Created **10+ microservices** integrating Kafka into an existing Monolith
- ▶ Contributed to Angular-to-React migration.
- ▶ **Hackathon Winner:** Automated CVE fixes, cutting engineering time from 14 hours to 30 minutes per CVE

KEY PROJECTS

IT Service Management System | Full Stack

- ▶ Spearheaded the development of an internal IT service management system that empowers employees to create tickets for any issue they encounter, streamlining the process for both users and administrators.
- ▶ Enhanced the UI by incorporating an intuitive interface that enables the admin to seamlessly assign tickets to service engineers, facilitating prompt resolution of technical issues and improving overall operational efficiency.

AI Log Analyser | Vector Search / LLM

- ▶ Upload logs → AI returns root cause, potential cause, and solution using vector search + LLM inference

Health Insurance Cost Prediction | Machine Learning

- ▶ Random Forest + Regression Supervised Learning model for cost prediction; deployed as a Flask web app

EDUCATION

B.E / B.Tech – Computer Science & Engineering

Languages: English (professional fluency)

Visvesvaraya Technological University (VTU)
